## SPECIAL OFFER FOR USERS OF UNDERWATER EPOXIES

By Paul Oman  
copyright 6/04

Special limited time offer! Send us a liquid, unmixed, sample of your underwater epoxy paint/putty (parts A and B) and we will send you a free sample of our matching product!

It's a win-win offer for everyone. Find out if your regular product matches up to the competition. Perhaps even discover new products that will help expand your business.

We offer many epoxy paints, fillers and putties that can be applied underwater and will match one of them to the sample you send us. Most, but not all, of our underwater products are non-hazmat to ship. Those that are hazmat cannot be shipped by air or outside the USA.

We have an article in the April 2004 issue of APCJ (Asia Pacific Coatings Journal) titled, "Sunk With A Paintbrush - Taking Paint Underwater." If you missed it, we can fax it to you.

Our underwater products include:

Corro Coat FC 2100 F™ - Dupont Kevlar™ and feldspar ceramic reinforced, non-hazmat epoxy paint. A high performance, cycloaliphatic curing epoxy. Roll or brush on - applies underwater very nicely. A simple 1:1 mix ratio.

Corro Coat FC 2100 A™ - Similar to the FC 2100 F listed above but more rigid for enhanced abrasion resistance. 2:1 mix ratio.

Corro Coat FC 2100 FAST™ - A cold weather version of the FC 2100 epoxies for use in temperatures down to about 38 degrees F. This version is hazmat and cannot be shipped by air or outside the USA.

Wet Dry 700™ - Dupont Kevlar epoxy repair paste, about oatmeal thick - off-white in color, non-hazmat to ship. We sell a lot of it in 1 quart kits homeowners with leaking swimming pools. Available in 1 quart, 1 gallon and 10 gallon units (1 to 1 mix ratio)

Quick Fix 2300™ - A fast setting (or cold water) version of Wet Dry 700. Mercaptan based. Generally packaged in 1 quart, 1 gal and 10 gal units (1 to 1 mix ratio)

Splash Zone™ A 788 - Yes, we sell the original underwater epoxy too - the famous extra thick Splash Zone (afraid this product is not available for private label). Limited availability - only two or three 2 gallon units kept in stock..

Watergard 300™/NSP 120 - This epoxy brushes on underwater, but not as nicely as the Corro Coat FC 2100. Colors are light blue and white. DBA nuclear tested and approved, approved and tested for fish facilities in Canada, NSF 61 potable water approved (but not during underwater application).

Epoxy Mortar Patch™ - This product is generally used to fill potholes, fix runways, chips in cement etc. when mixed with sand to form a slurry (user provides the sand). It can be used underwater for the same application. This version is hazmat and cannot be shipped by air or outside the USA.

We also offer marine epoxies, two-part urethanes, all sorts of fillers and thickeners (including copper powder, graphite, Teflon™, fumed silica, wood flour, microspheres to name a few). Plus, water activated pipe wrap kits, moisture cured urethanes, etc.

**SPECIAL NOTE:** In some marine environments the proximity of different types of metals (known or unknown) can form a tiny cathodic cell (electrical field) that will prevent ALL underwater epoxies from bonding. Always test for this at the job site before committing to any project.

Why PEP

We are a multi-person company working with multi-person suppliers and formulators. We won't be risking your business with one product line, one set of formulations, one manufacturer or a single person supplier

At PEP we let you private label, resell and repackage our products as you see fit, without a written agreement, contract, minimum order or quotas. Why should your efforts promote your supplier's company instead of yours? In many cases, the products used are remembered long after the contractor's name is forgotten. Private labeling keeps you in the loop and can become an additional revenue stream whether you do the work or not. Private labeling gives you exclusivity, complete control over price, and a sales region as big or as small as you want. Suppliers that put YOUR company first, will encourage you to private label.

We accept credit cards for quick, easy and prompt payment and shipping. We openly post our prices on our web site. You'll even find data sheets and MSDS, as well as on-line ordering at our web site. We make it quick and easy for you to get prices, information and place orders. Why do other coating suppliers make you jump through hoops to get that kind of service?

We offer most products in quart to two quart test units so you can try before you commit to a multi gallon purchase (or for very small projects). Sure, those little kits are a pain for us to assemble, but they are extremely useful to our customers. Who else cares enough to sell you a quart of coal tar epoxy or a quart of underwater repair putty, shipped within 24 hours or less?

Most of our epoxies described above are in the \$70-\$85 per gallon price range - generally below that of other high performance underwater epoxies.

## HOW YOU CAN BENEFIT

We offer more underwater epoxy products than anyone else, from the original Splash Zone™ to the cutting edge Wet Dry 700™.

**WE ARE THE MARKET LEADERS.** Don't accept off-brand underwater products from tiny formulators more interested in selling product than in helping grow your business. Private label any or all of our underwater coatings and add them to YOUR products/services under YOUR name.

So, here's our offer again: Send us a liquid, unmixed, sample of your underwater epoxy paint/putty (parts A and B) and we will send you a free sample of our matching product!

-----  
 We collect our email addresses from trade shows, direct contact, magazines and internet searches. We regret if you are unhappy with our newsletter we will remove your name immediately if you so wish. Because we keep adding addresses, it is possible your email address will get back into the database at some future point. If so, pls 'remind' us again and we will remove it again REMOVE
